services**

# Aftermarket services

## Our expertise ensures your peace of mind

With expertise in condition monitoring, performance analysis, system design, and more, PSW ensures the safe and reliable management of your assets from technical, commercial, and financial perspectives.

We maximize the performance and lifespan of your assets through ongoing maintenance and enhancements, ensuring long-term efficiency and reliability.

### Technical

Delivering operational excellence and reliability for your renewable energy assets through specialized monitoring, maintenance, and engineering solutions.

### Commercial

Ensuring compliance, reducing risk, and maximizing the long-term net value of your assets.

### Financial

Helping you optimize returns, mitigate risks, and maintain compliance and liquidity across your renewable energy portfolio.

## Through our Operation & Maintenance and Service Level Agreements, we provide:

Condition monitoring and SCADA analysis

Power performance analysis and optimisation

24/7 remote monitoring and support

Performance warranties

Inspections

Scheduled maintenance

Unscheduled maintenance

Warranty corrections

Replacements

Spares sales and management

Life extension

End-of-life-strategy

Asset upgrades and retrofit campaigns

# Remote operation centre

From our operations center, we enhance asset productivity and operational efficiency by providing comprehensive support for asset management, operations, and maintenance.

Staffed by a team of seasoned professionals with expertise in maritime safety, major utilities, and asset maintenance, we ensure rapid issue detection and swift response to minimize production losses.

## On-site services

Our highly skilled engineers and technical specialists provide exceptional operations and maintenance support.

Beyond on-site assistance, they are committed to providing competitive, comprehensive services designed to boost revenue and minimize costs.

Our site management teams ensure the seamless and safe operation of your energy solutions through thorough oversight, efficient resource coordination, and strict adherence to health, safety, and environmental (HSEQ) standards.

## Repowering

We create and implement a customized end-of-life strategy for your project, safeguarding the future value of your assets.

Our team works closely with you to develop the best approach for maximizing energy production and extending the lifespan of your assets.

By utilizing the latest technologies, we stay at the forefront of industry advancements, enhancing your asset's longevity and supporting a greener, more sustainable future by reducing waste.
